FORMATO EUROPEO PER IL CURRICULUM VITAE

Name	Daniela D'Amore
Address	Via San Francesco D'Assisi n.9, Brusciano (NA)
Telephone number	3913644886
E-mail	danieladamore92@icloud.com
Country	Italy
Birth	28/11/1992

STUDY AND FORMATION

Date (from – to)	2014-2017
University	University of Naples "Parthenope"
Master's degree	Navigation's science and tecnology
Degree thesis	Thermohaline interannual variability of Ross Sea's Shelf Water (Antarctica)
Day	27/04/2017
Grade	110/110

Date (from – to)	2011-2014
University	University of Naples "Parthenope"
Bachelor's degree	Nautical and aeronautical science
Degree thesis	Southern Ocean's circulation aspects
Day	18/11/2014
Grade	110/110 e lode

WORK EXPERIENCES

Date (from – to)	02/11/2016-14/11/2016 (225 hours) Internship pre-laurea as researcher on the oceanographic ship “MINERVA UNO” of the l’IAMC-CNR of Naples, giving a contribute to the research campaign named SAFE_2016. During this research we collected geophysics (using Magnetometer, Sparker, Side Scan Sonar, Multi Beam), geological (bottom sample) and oceanographic (using CTD, ROV) data of Gulf of Naples.
	24/09/2015-28/09/2015 internship as researcher on the oceanographic ship “ASTREA” during the research’s campaign named ASTRA by ISPRA Institute. During this research we collected biological data to analyze water pollution level of the Adriatic Sea. We collected water and mussel sample.
	2015 (5-8-10 June) Activities in Micropaleontology Laboratory of IAMC-CNR.
	06/10/2014-18/11/2014 (225 hours) Internship pre-laurea at Oceanix S.R.L. I analyzed oceanographic e geomorphological data and I learned to use the software QINSy..
CERTIFICATIONS	Trinity College London GRADE 8 (Level B2)

INTERESTS AND MOTIVATIONS

During my studies I’ve developed a particular interest to physical oceanography, climatology and meteorology, but my greater passion is to study Antarctica. In my master’s degree thesis I’ve analyzed the variability of potential temperature and salinity of Ross Sea’s Shelf Water along the water column from 1995 to 2016. This research brought me to improve my knowledge about climate change because my results are very important evidence that something is changing in the ocean circulation. So I’m still analyzing 2017 and 2018 CTD data to continue to collaborate at this research with “Parthenope” University.
During this Master I would to learn something more about meteorology and, in particular, weather forecast that is one of my biggest curiosity. So I hope that this experience will give me the possibility to come in this world to give a contribute to the actual e future climate research.
